SUMMARY

Generative AI engineer and undergraduate at NMIMS Hyderabad (B.Tech CSE, Data Science & AI; graduating July 2028), certified in agentic AI engineering by IIT Mandi. Builds and ships RAG and multi-agent systems end to end, most recently a hash-chained agentic commerce platform for a Razorpay hackathon and an AI digital twin for a DRDO problem statement at Smart India Hackathon. Seeking a Generative AI internship to take features from prototype to production.

TECHNICAL SKILLS

Core CS: Python, C++, C — Data Structures & Algorithms, System Design fundamentals

Generative AI: Retrieval-Augmented Generation (RAG), vectorless RAG, agentic workflows, multi-agent systems, deep agents, prompt engineering, guardrails, LLM evaluations, LLM gateways, vector databases and embeddings

Frameworks: LangChain, LangGraph, Google Agent Development Kit (ADK), FastAPI, Next.js

Programming: TypeScript/JavaScript, Node.js, Java, HTML, CSS

Data: Pandas, NumPy, SQL, DBMS and relational querying, exploratory data analysis, data cleaning, Power BI (DAX), Excel, Google Sheets

Cloud & Practices: AWS, Git and GitHub, manual testing and defect logging

Languages: English (fluent), Hindi (fluent)

EXPERIENCE

AI Engineering Trainee, Agentic AI Program — Indian Institute of Technology (IIT) Mandi 2 months

- Completed a certified, project-based program in generative and agentic AI engineering, building working retrieval and multi-agent pipelines over document and tabular data.
- Applied guardrails and LLM evaluation methods to check output quality and reduce unsafe responses.

Generative AI and Testing Support — RAG-based ERP Product

- Supported implementation of generative AI features on a live ERP product, including retrieval over internal business documents so users could ask questions in plain language.
- Worked with the testing team to validate data flows and AI responses, reproducing/logging defects against expected results.
- Collaborated with engineers and testers on ambiguous requirements, escalating blockers and proposing fixes.

PROJECTS

PRAMANA — AI Digital Twin for UAV Engine Health | Smart India Hackathon 2026 (Internal Selection Winner)

Python, LSTM/GNN, React, simulated telemetry

- Co-built a real-time digital twin for DRDO's problem statement on aero piston engines in MALE UAVs, modeling engine health as the disagreement between redundant physical estimates of the same quantity from simulated telemetry (temperature, RPM, fuel flow, vibration).
- Owned the frontend end-to-end, including a live 3D engine visualization that judges specifically called out as a highlight of the demo.
- Won the internal selection hackathon against the rest of the college; team now represents NMIMS Hyderabad at the main Smart India Hackathon 2026.

Mandate — Agentic Commerce Negotiation Platform | Razorpay Hackathon, Track 1 (Agentic Commerce)

Python, FastAPI, OpenAI API, Next.js/TypeScript, Razorpay SDK | github.com/dev591/razorpay

- Designed a simulated marketplace where one buyer agent negotiates against multiple seller agents to find the best deal, using a custom Intent/Cart/Payment mandate protocol.
- Implemented a hash-chained audit trail with a cart-hash lock prior to payment, and demoed a live tamper-and-reject scenario to prove the guarantee under judging.
- Built and shipped solo in a round-the-clock sprint against a hard deadline; backend on FastAPI + OpenAI API + Razorpay test-mode SDK, frontend on Next.js/TypeScript/Tailwind.

Vela — Medical Assistance Application for Indian Hospitals

RAG, Google ADK, Python

- Built an assistant that answers patient and staff questions from hospital documents using a RAG pipeline on Google ADK.
- Structured, chunked and indexed source documents so responses reference the correct source, cutting manual lookup time.

EDUCATION

Narsee Monjee Institute of Management Studies (NMIMS), Hyderabad Campus Hyderabad, India

Bachelor of Technology (B.Tech), CSE – Data Science & AI Expected Graduation: July 2028

CERTIFICATIONS

- Certified AI / Agentic AI Engineer — IIT Mandi
- AWS Certification, Machine Learning — Amazon Web Services
- Job Simulations (Forage): Deloitte Australia Data Analytics, British Airways Data Science

LEADERSHIP AND ACTIVITIES

- Secretary, Science and Technology and E-Cell — IIT Mandi: coordinate technical and entrepreneurship events. Also Founding Member, Algorand Bharat x NMIMS Club (under Prof. Naresh Vurukonda).
